

Retail Sales & Inventory Intelligence Dashboard

Business Insights Report

Project Overview

This project presents an end-to-end retail analytics solution built using Excel, PostgreSQL, SQL, and Power BI. The dashboard helps analyze sales performance, customer trends, category contribution, and product-level insights to support business decision-making.

Key Performance Indicators (KPIs)

Metric	Value
Total Revenue	7.69M
Total Orders	1.445K
Total Customers	1.445K
Average Order Value	5.32K
Total Quantity Sold	7K
Total Products	321

Business Insights

1. Revenue trends show strong sales performance during the early months of the year.
2. Mountain Bikes generated the highest category-wise revenue contribution.
3. Top-performing products significantly contributed to total business revenue.
4. A small group of brands contributes a major share of total sales revenue.
5. Average Order Value indicates strong transaction size across customer orders.
6. Interactive slicers enable filtering by category and month for detailed analysis.

Tools & Technologies Used

- Excel – Data Cleaning & Preparation
- PostgreSQL – Database Management & SQL Queries

- SQL – Data Analysis & KPI Extraction
- Power BI – Dashboard Design & Visualization

Conclusion

The dashboard successfully transforms raw retail data into meaningful business insights. It enables stakeholders to monitor revenue trends, identify top-performing products, analyze customer behavior, and support data-driven business decisions through interactive visualizations.
